Abstract. The abstract should briefly summarize the contents of the paper in 150–250 words.

Keywords: First keyword · Second keyword · Another keyword.

1 Introduction

By modeling large datasets of texts, language models implicitly learn to encode linguistic properties that can be leveraged in a wide variety of downstream tasks. In particular, transformer-based language models have become a cornerstone technology in Natural Language Processing (NLP) by advancing the state-of-the-art in many NLP tasks. However, the amount of data needed to adequately train such models can be debilitatingly high for many languages. [citation needed]
